

Team 2: HealthSync

- Assists users monitor nutrition, workouts, and health goals in one integrated system.
- Targets health-conscious individuals who currently rely on multiple fragmented apps to manage diet and exercise data.

Problem

- Need to track daily nutrition.
- Separate workout data logging.
- Fitness is a combination of diet, workouts, and health progress

Our Proposed Solution

- Integrated meal and workout logging with automatic nutrition data extraction
- Track progress towards fitness goals (analytics)

Key Requirements

Functional Requirements

- **User Account Management**
Auth, Customisable Profile
- **Meal Logging & Nutrition Tracker**
Manually / upload image
- **Workout Tracking**
Duration, intensity, calories burned
- **Health Goal Management**
Calorie, nutrient, weight targets
- **Unified Health Dashboard**
Nutrition intake, workout history, progress analytics
- **Personalized Workout Recommendation**

Non-Functional Requirements

- **Scalability**
Multi user, increasing data
- **Performance**
Optimised queries, responsive UI/UX
- **Extensibility**
New health metrics, food items, workouts
- **Maintainability**
Modular design -> Separation of concerns
- **Security**
User privacy
- **Reliability & Testability**
Unit, integration tests
